

**GB Supersyn Plus 2T, a premium, fully synthetic 2-stroke oil formulated to help reduce costs**

**LUBRICANTS**

**CHALLENGE:**

*Producing a high-quality and affordable 2-stroke oil that can be used as an alternative to the OEM product*

- Tree surgeons and others in the horticultural sector are looking for an affordable alternative to an expensive OEM branded product for their large chainsaws.
- The product must meet the performance characteristics of the current OEM product (e.g. low smoke, clean plugs, quick starting)

**SOLUTION:**

*Formulate a high-quality product using a combination of synthetic base fluids and additive packages that will ensure premium performance characteristics*

- GB Lubricants must develop a product that has excellent anti-wear and all-temperature detergency properties employing a low ash formulation
- The oil must match the quality and performance characteristics of the OEM product and meet other OEM specifications and industry standards (e.g. Husqvarna, JASO, Rotax)

**OUTCOME:**

*A high-quality fully synthetic 2-stroke oil has been developed, field tested and approved by tree surgeons*

- Greatly reduced cost when compared to the OEM product but the same premium quality
- Trialed by several tree surgeons, who stated that the oil matched the performance of the OEM product with noticeable savings

**VALUE:**

**Savings of up to 65% per litre when compared with the equivalent OEM product.**

**GB Supersyn Plus 2T**

Premium, fully synthetic 2-stroke oil

- For use in all types of air-cooled, high-speed, high-performance 2-stroke engines, from motorcycles to forestry equipment and snowmobiles
- Low smoke and clean plugs due to low ash technology
- Enhanced engine cleanliness leading to quick starting performance
