INDUSTRIAL CASE STUDY

GB Industrial MP Oil 150, a premium quality rust and oxidation inhibited lubricating oil, further developed for OEM approved use in reciprocating gas compressors.

GB LUBRICANTS

CHALLENGE:

GB Lubricants' customer required a product with formal approval to use in their reciprocating gas compressors.

- OEMs often necessitate that an oil with their formal approval is used in their machines to ensure the correct performance characteristics are met.
- Failure to use approved lubricants leads to warranties being voided and maintenance costs having to be covered by the customer.

SOLUTION:

Developed an existing product to meet the required performance characteristics of the OEM lubricant.

- Thorough lab testing was completed with several formulations to determine the best suited product to the OEM's requirements.
- Final product was sent to the OEM for approval and suitability for use of GB Industrial MP Oil 150 was confirmed.

OUTCOME:

GB Lubricants' product can be used with the confidence that it has been approved for use by the OEM.

- Customers purchase this product knowing that it is approved for use in the OEM's machines.
- OEM approvals give confidence to customers that they are using the correct lubricant.
- Reduced costs when compared to OEM genuine products but the same performance.

BENEFIT:

Customers are not required to use OEM genuine products, instead being able to use products of the same quality and performance level at a reduced cost, leading to substantial savings. Customers can have confidence that the product they are using has been approved for use by the OEM and they are using the best product for their reciprocating gas compressors.

GB Industrial MP Oil 150

Rust & Oxidation Inhibited, Multi-Purpose Lubricant

Developed using the highest quality mineral base oils, incorporating ashless oxidation & rust inhibiting additives, for use as a general-purpose gear, circulating, compressor, machine tool & vacuum pump oil.

- Exceptional protection against corrosion of steel and other non-ferrous metals.
- Excellent hydrolytic stability.
- Wide range of applications.

AVAILABLE PACK SIZES:

- 5L drum
- 25L drum
- 205L barrel
- 1,000L IBC
